Competence Description

Competence	Java
Level	2 of 5 - Basic / Junior

Summary

Writes working, structured Java code independently for well-defined tasks. Understands core OO principles and the standard library, but still needs guidance on design and edge cases.

Knowledge

- Inheritance, interfaces, abstract classes, and polymorphism
- Collections framework: List, Set, Map and when to use each
- Generics basics, enums, and records
- Exception handling: checked vs unchecked, custom exceptions
- equals/hashCode and immutability basics
- Streams and lambdas (basic use)
- File I/O and working with dates/times (java.time)
- Build tools basics (Maven or Gradle) and unit testing with JUnit

Skills (can do)

- Design a small multi-class application with clear responsibilities
- Write unit tests for own code
- Use a debugger effectively and read stack traces
- Use Git for everyday work
- Consume a simple REST API or read/write JSON

Indicators for assessment

- Can justify choice of collection type for a task
- Can refactor duplicated code into methods or classes
- Delivers small features with light review
